

TRAFFIC WASTE AUDIT

Where media spend loses signal and value.

A fixed-scope analysis of traffic quality, source risk and estimated media waste. Every decision is tied to an explicit signal and supporting evidence.

SAMPLE PORTFOLIO

Synthetic Media Portfolio / August 2026

Analysis complete

REQUESTS ANALYZED

2.0M

100% of supplied rows

REVIEW DECISIONS

24.0%

9.2% watch / 14.8% block

POTENTIAL WASTE

\$1,550

14.8% of monitored spend

AT-RISK PLACEMENTS

31

of 284 traffic sources

EXECUTIVE SUMMARY

The finding in one page.

The sample indicates a concentrated quality problem rather than portfolio-wide failure. Two sources account for most blocked spend; three additional placements need controlled review. The safest next move is a short shadow-mode remediation cycle, not blanket blocking.

ALLOW

76.0%

Low configured risk

WATCH

9.2%

Validate before action

BLOCK

14.8%

Strong evidence present

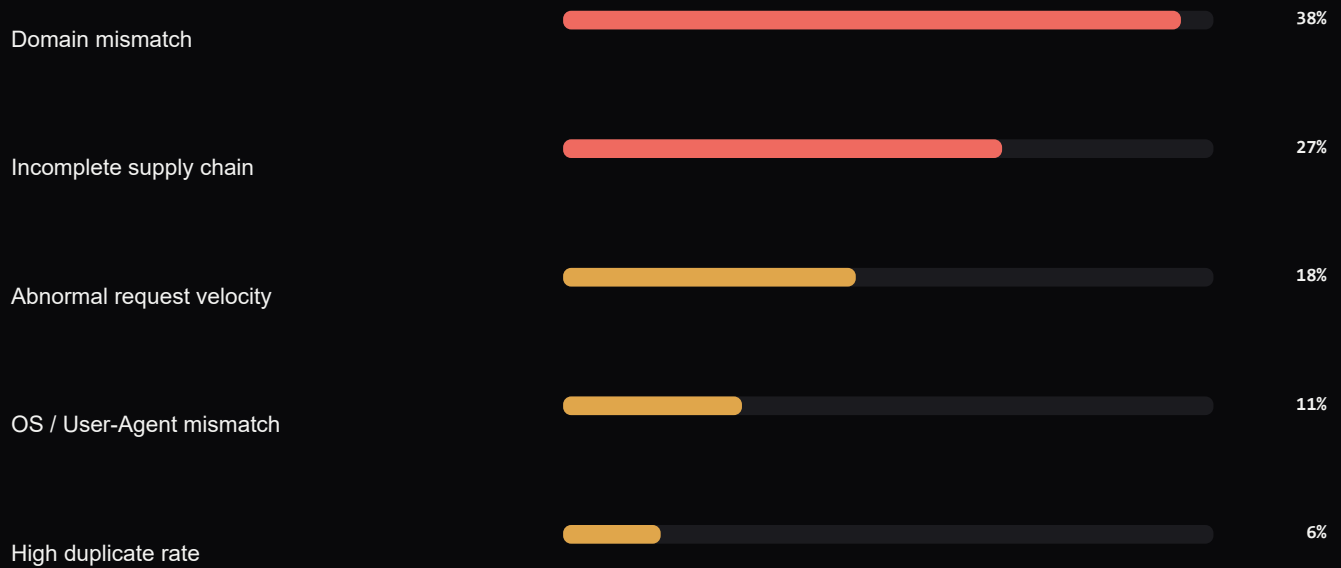

RECOMMENDED DECISION

Pause two sources after buyer-side validation.

- Confirm the declared domain and supply-chain identity for the two BLOCK sources.
- Apply temporary caps to the velocity outlier while retaining evidence.
- Re-run the same fingerprinted sample after 72 hours and compare spend movement.
- Enable automated action only after the shadow decision matches buyer policy.

EVIDENCE DISTRIBUTION

Why traffic entered review.

HOW TO READ THIS

Signals are evidence, not identity claims.

A BLOCK recommendation means configured evidence crossed the review threshold. It does not claim that every request came from a bot or that fraud is proven without buyer-side validation.

SOURCE FINDINGS

The placements to review first.

SOURCE	PRIMARY EVIDENCE	DECISION	RISK	AT-RISK
premium-publisher.example	Declared and observed domains differ	BLOCK	92	\$610
seller-unknown / placement-31	Missing seller identity in supply chain	BLOCK	85	\$420
video-feed-07	Request velocity above configured limit	WATCH	54	\$270
app-zone-14	Device OS conflicts with User-Agent	WATCH	47	\$160
exchange-tail-09	Duplicate rate above portfolio baseline	WATCH	34	\$90

The five rows above account for the complete \$1,550 potential-waste estimate in this synthetic sample. A client report includes all scored rows and exportable reason codes.

FIXED-SCOPE ENGAGEMENT

From raw log to decision-ready report.

The Traffic Waste Audit is the lowest-risk way to validate Verdict against real data before any live integration or automated buying action.

CLIENT PROVIDES

- 7-30 days of JSON, JSONL or CSV
- One traffic source or buying platform
- Optional spend and conversion fields
- No production credentials required

Verdict DELIVERS

- ALLOW / WATCH / BLOCK evidence
- Source-level waste estimate
- CSV evidence export
- Executive PDF and action plan

TRAFFIC WASTE AUDIT

First engagements from \$750

Typical delivery: 3-5 business days. The audit fee can be credited toward an approved platform pilot.
